Nimbus Notes is a note-taking application built by Wren Labs, a company founded in 2019 in Pune, India. The product stores every note as a plain Markdown file so users can export their entire library at any time without losing formatting. Wren Labs currently employs 42 people across product, engineering, and support.

Pricing. The Starter plan costs 9 USD per month and includes 5 gigabytes of storage and unlimited notes. The Team plan costs 29 USD per user per month and adds shared workspaces, version history for 12 months, and priority support. Annual billing gives two months free on either plan.

Support and refunds. Support is available Monday to Friday from 9 AM to 6 PM India Standard Time. Refunds are issued within 14 days of purchase, no questions asked. Customers can reach support at support@nimbusnotes.example or through the in-app help panel.

Security. All notes are encrypted at rest with AES-256 and every connection uses TLS 1.3. Nimbus Notes completed SOC 2 Type II certification in 2024. Two-factor authentication supports authenticator apps and hardware keys. Workspace admins can enforce single sign-on with SAML.

Mobile apps. The iOS app requires iOS 15 or newer and the Android app requires Android 10 or newer. Both apps support offline editing and sync changes when connectivity returns. The local cache is capped at 200 MB and can be cleared from settings.

Integrations. Nimbus Notes connects to Slack for daily digests, imports from Notion and Evernote, and links pull requests through GitHub. Zapier triggers and actions are available on the Team plan. Outgoing webhooks are retried three times with exponential backoff.

Developer API. The REST API uses OAuth2 for workspace installs and personal API keys for scripts. The default rate limit is 120 requests per minute per token. API keys must be rotated every 90 days. Responses are paginated with a cursor and a maximum page size of 100 records.

Changelog. Version 3.2 added tables and callouts. Version 3.3 introduced full-text search with filters by tag and date. Version 4.0 shipped in March 2025 with a rewritten editor and faster sync. Version 4.1 added offline conflict resolution.

Limits. A single note may not exceed 2 MB of text. Each account can create up to 50 workspaces. A workspace supports 10,000 notes and 500 tags. Attachments count toward the plan storage quota and are capped at 25 MB per file.

Data retention. Deleted notes stay recoverable from the trash for 30 days. Encrypted backups are retained for 35 days. Users can request a full export as a zip archive containing Markdown files and attachments. Account deletion removes data within 30 days of confirmation.
